

BIOPRO

Get inspired by novel process technology

- approaches to biotech/biopharma research, upscaling and manufacturing

Nine start-ups currently operate under the BIOPRO Umbrella. They are commercialising novel technologies for the bioprocessing industry. The technologies range from optic scanning of cell morphology to visualisation platform for operational excellence.

ADDRESSING GLOBAL MARKET NEEDS

The start-up companies get access to discuss and test their technologies with the participating companies and universities, get financial support and guidance from BIOPRO. The aim is to develop the companies towards addressing the global market needs.

COLLABORATORS

Two universities are participating in BIOPRO; **Copenhagen University (UCPH)** and **Danish Technical University (DTU)**. Six leading Danish biotech industry players are participating in BIOPRO: **Novo Nordisk, Novozymes, Chr. hansen, Xellia Pharma, CP Kelco** and **Ørsted**.

BIOPRO

BIOPRO is a Danish consortium aimed at developing and commercialising novel technologies for the bioprocessing industry. The BIOPRO consortium is a triangular collaboration between universities, large industry players and start-up companies.

THE AIM OF THE MEETING IS TO...

1/ Meet the start-up companies under BIOPRO and get inspired by novel process technology approaches to be used in biotech/biopharma research, upscaling and manufacturing.

2/ Learn about the BIOPRO consortium and the collaborative approach between Universities, Large companies and start-ups.
